BIONATOR INSTRUCTIONS

OBJECTIVE: to reduce overbite; encourages lower jaw growth.

-Your bionator only works when it is worn properly. It should be held between the upper and lower teeth to be effective.

-If your bionator has an expansion screw, you'll be instructed to turn the screw two times a week. We will measure the amount of overbite at each visit and adjust the wearing time accordingly.

-When you first receive your bionator, you will be wearing it 24 hours a day except when eating or brushing your teeth. It should also be removed while playing sports or a musical instrument.

-The bionator may be cleaned with a toothbrush and toothpaste a few times a day, and may be soaked in cool water with Efferdent once or twice a week.

As with every removable appliance, when it is not in your mouth, it should be in its case. Never wrap your bionator in a napkin or leave it on a lunch tray, and never leave your bionator where a pet can get to it – they **will** eat it!
